Julia Persson

Founder & CEO, Scita Health ApS
(participant, WHO/Europe Public Health Innovation Platform)
Founding Architect, Nordic Charter for Women's Health 2040
Advisory Board, myHealth@myHands
(EU Digital Europe Programme)

Biography

Julia Persson is the founder and CEO of Scita Health ApS, a Danish precision health company. Scita is developing clinical decision support to help women prevent chronic disease through perimenopause and menopause, the years when the risk of cardiovascular, metabolic and cognitive disease rises. Its clinical determinations come from fixed rules built on graded evidence; AI talks with women in plain language and cannot change the results. Scita meno, a free map of midlife symptoms, went live in October 2026, and the personalised service is in pilot development. Scita Health is a participating organisation in the WHO/Europe Public Health Innovation Platform.

Before Scita, she spent more than 20 years in regulated industries, moving between business and technology. At Maersk she was deputy head of corporate treasury, responsible for the internal bank across more than 120 countries. She then headed cash management for large corporates at Swedbank, led Nordic financial services at AWS and was Managing Director for Nordic Cloud at Accenture. She came to women's health through her own experience.

She is the founding architect of the Nordic Charter for Women's Health 2040. It was co-created at the Danish Parliament in September 2025 with 136 participants from Denmark, Finland, Iceland, Norway and Sweden, and launched in December 2025. Five expert groups, working separately, arrived at the same four infrastructure pillars: people, money, policy and data. The Charter is an open commons under CC BY 4.0, and its methodology was published in The Lancet Obstetrics, Gynaecology, & Women's Health in January 2026. She is the main author of the Implementation Playbook, published with the Copenhagen Institute for Futures Studies in May 2026 and carried forward by volunteer ambassadors in all five countries.

She serves on the EU advisory board for myHealth@myHands, a Digital Europe Programme project on citizen-controlled access to health data through the EU Digital Identity Wallet, and on the EU Strategic Advisory Board of Women's Health Horizons. She is also on the board of 123cards.

Areas of Expertise

Women's health · Chronic disease prevention · Clinical decision support · AI in women's health · Precision health · Digital health innovation · Perimenopause and menopause · European Health Data Space · Nordic health policy · Multi-stakeholder coordination · MDR medical device regulation

Short Scita focus

Julia Persson is the founder and CEO of Scita Health ApS, a Danish precision health company developing clinical decision support for women through perimenopause and menopause. Fixed clinical rules decide; AI explains them in plain language. Scita meno, a free map of midlife symptoms, went live in October 2026. Scita Health is a participating organisation in the WHO/Europe Public Health Innovation Platform. Julia is the founding architect of the Nordic Charter for Women's Health 2040, whose methodology was published in The Lancet Obstetrics, Gynaecology, & Women's Health in January 2026, and the main author of its Implementation Playbook (May 2026). She serves on the EU advisory board for myHealth@myHands and spent more than 20 years in digital transformation at Maersk, Swedbank, AWS and Accenture.

Short WH2040 focus

Julia Persson is the founding architect of the Nordic Charter for Women's Health 2040, developed through participatory foresight with 136 contributors from the five Nordic countries, in partnership with the Copenhagen Institute for Futures Studies. The Charter's methodology was published in The Lancet Obstetrics, Gynaecology, & Women's Health in January 2026, and she is the main author of its Implementation Playbook (May 2026). Separately, she is the founder and CEO of Scita Health, a Danish precision health company for women in midlife. She serves on the EU advisory board for myHealth@myHands and has spent more than 20 years in digital transformation in regulated industries.
